RMIT University Vietnam, Saigon South Campus

From Stakeholder Insight to Market Impact

Dr. Phuong Nguyen

Dr. Phượng Nguyễn

- 15 years of working experience in Europe & Asia.
- Teach executive and postgraduate courses in Thailand, India & Vietnam.
- Former UN officer in HCMC, Vietnam and London, UK.

Agenda

1	**Divergent Thinking**	Generating ideas
2	**Systematic Inventive Thinking (SIT)**	Generating structured ideas
3	**Stakeholder Pain Points**	Developing Empathy
4	**Stakeholder Journey Map**	Finding where value breaks

Activity 1: divergent thinking

Teamwork

- Instructions will be given by the lecturer.

Activity 2: group discussion

Teamwork

- Instructions will be given by the lecturer.

What is Innovation?

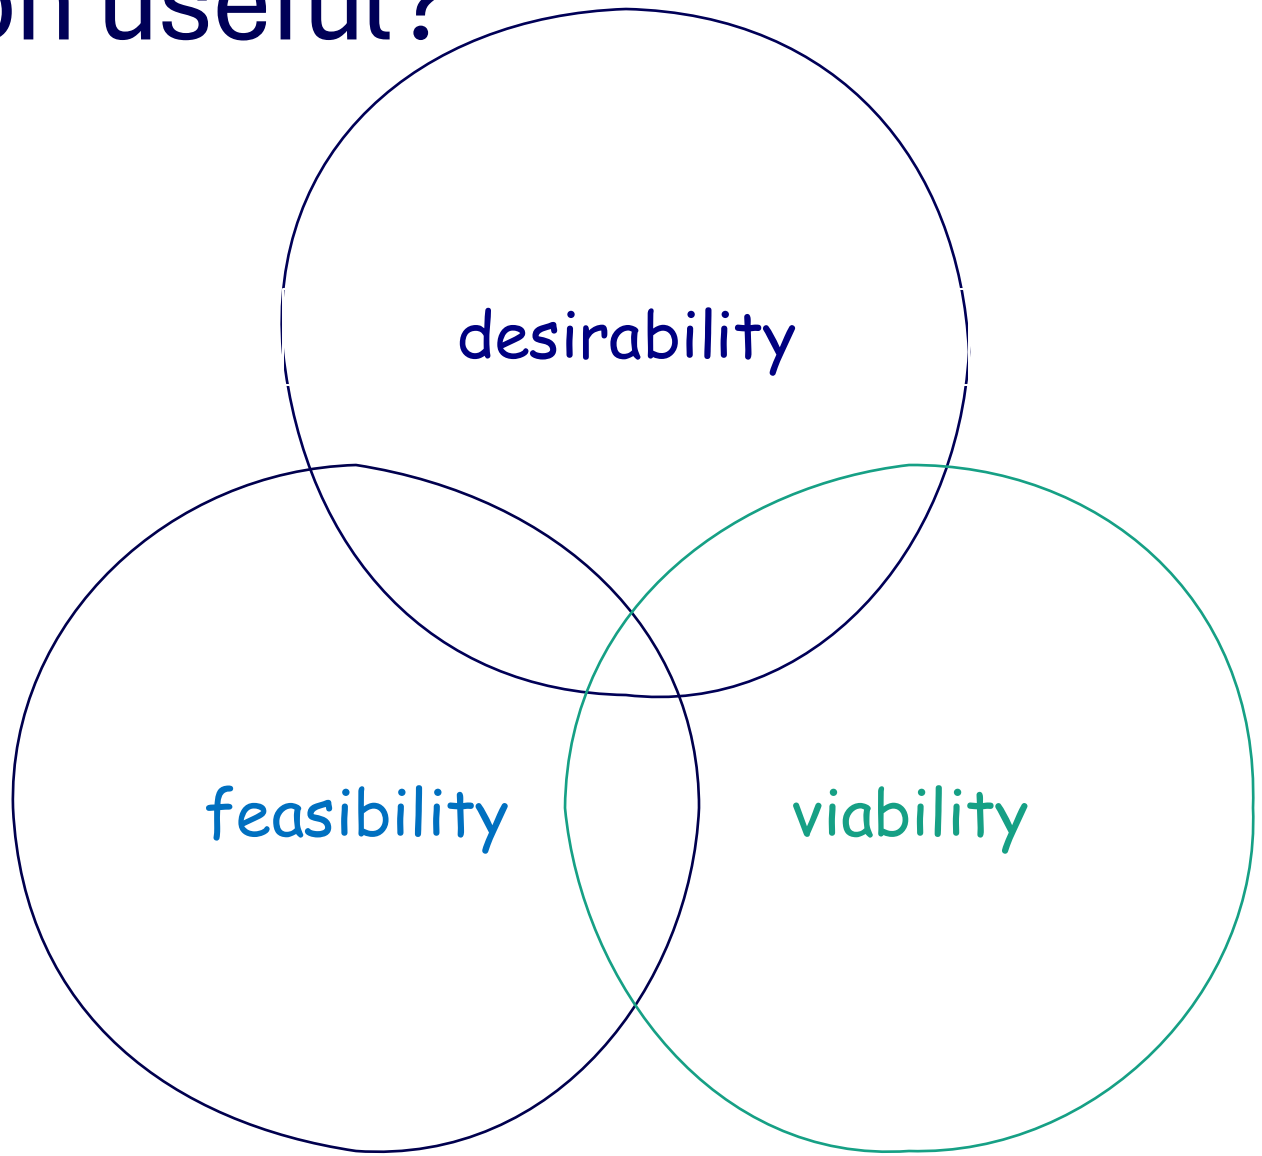

Innovation is a product, service, process or business model that has 2 characteristics:

- Novel
- Useful

A broader definition of usefulness considers desirability, feasibility and viability.

What makes an innovation useful?

- **Desirability:**
  - Is there a market for this innovation?
  - Will people want and need it?
- **Feasibility:**
  - Is this innovation functionally possible?
  - Is this innovation technically possible?
  - Will laws and regulations allow it?
- **Viability:**
  - Can we offer this product profitably?
  - Can we produce/deliver this innovation over a long period of time (financially sustainable)?

Ok, so we need to innovate… What options are out there?

What is Design Thinking and why should you care about it?

How is Design Thinking implemented when tackling business challenges?

Customer's Pain Point?

- Pain Points are moments in time when a consumer experiences **frustration, difficulty or uncertainty**.
- Opposite of Pain Point is Gain.

RMIT UNIVERSITY

Pain points & latent pain points

- Explicit Pain Points are those which the customer/stakeholder can easily describe.

- Customer/stakeholder's Latent Pain Points: are hidden from the their own awareness on how the experience could be better.

RMIT UNIVERSITY

Menti

- QR code will be given on the day.

Stakeholder Journey Maps

SJM

Stakeholder Journey Map

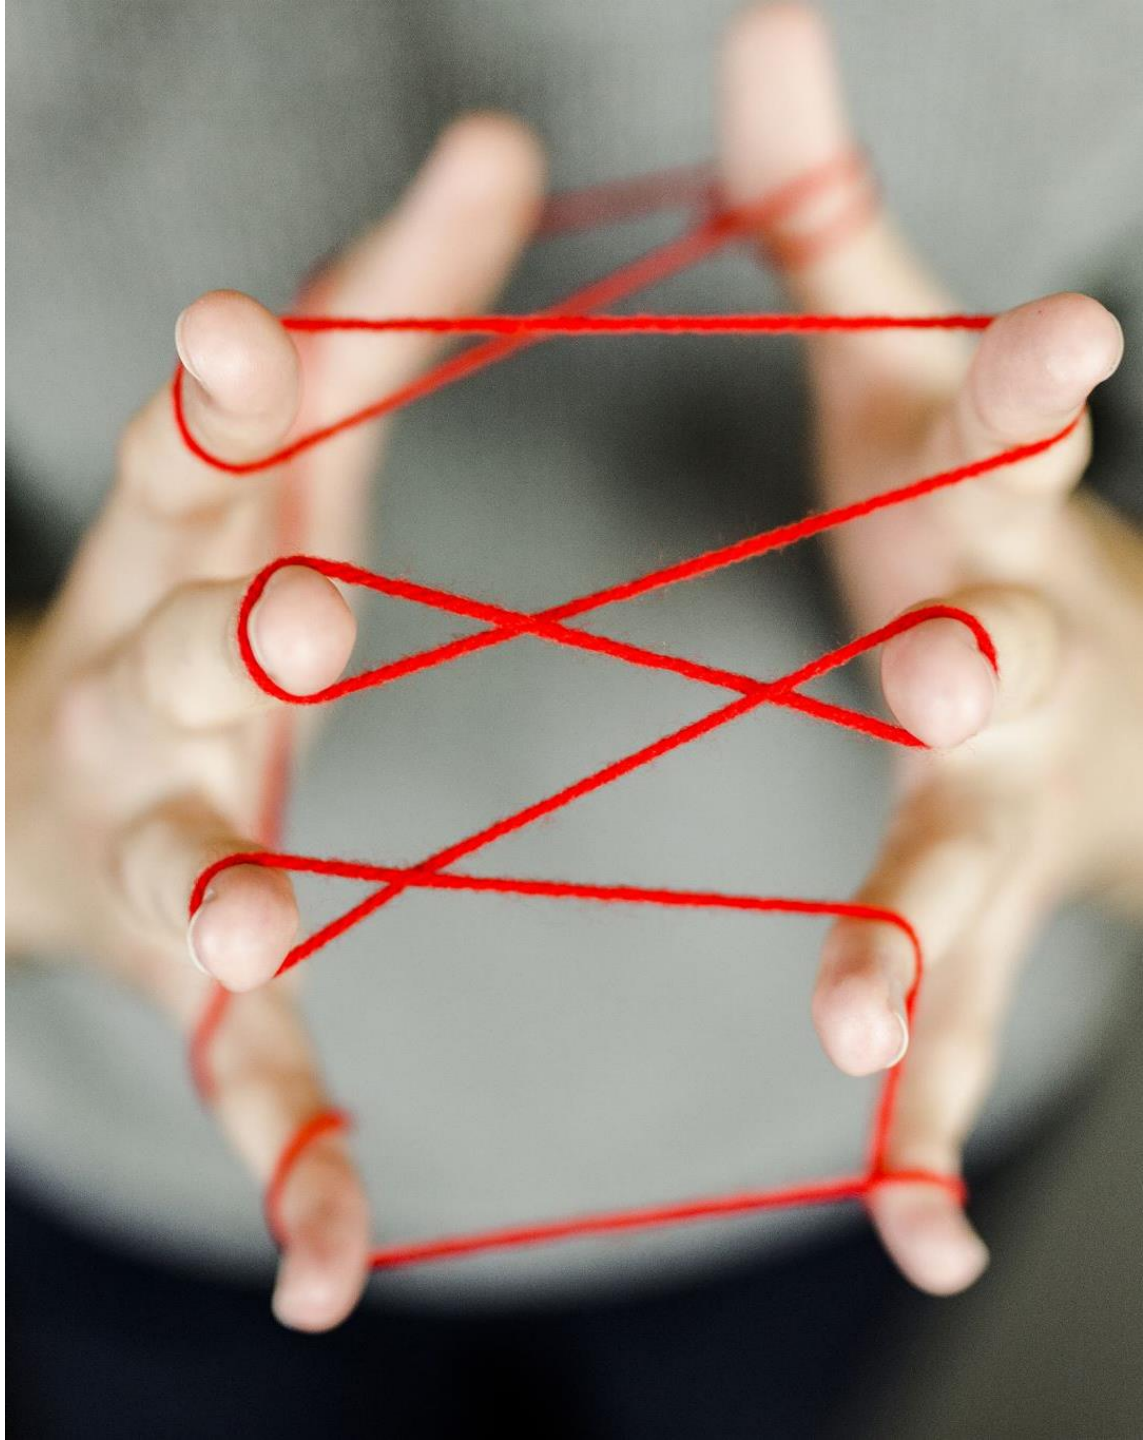

SJM

- Help you collect and organise what you know
- Are about knowing *what* your customers/stakeholders do and *why* they do it
- Are also about identifying pain points and gains
- Are representations of a customer/stakeholder's experience as they encounter a problem or interact with a product

RMIT UNIVERSITY

Journey map: how?

1. Put yourself in the mind of the user
2. Define where the journey begins and ends
3. Define the intermediate phases
4. How are we interacting with the user?
5. Define how the user experiments each stage
6. Measure time and/or define KPIs (optional)
7. Stretch backwards and forwards

RMIT UNIVERSITY

Customer Journey map: example

Stage	Aware	Consider	Buy	Use	Maintain
Customer activities	Feels traders are charging too high	Asks neighbours Looks for options in market	Goes to Apps Store Looks for App Downloads app in Apple Store	Uses app Calculates volume Downloads report	Repurchases annual fee
Customer goals	None	Find a solution not to be ripped off	Download app in phone	Calculate timber volume	Maintain service
Touch points	None	Google Ads. Blogs	App store	Customer service	App Store
Responsible	None	Marketing Dpt.	Marketing Dpt.	Customer service.	Marketing Dpt.
Experience					
Emotions and pain points	Feeling robbed	Desperate as there is no clear place to find info	A bit overwhelmed when looking for app	Hard to use	Glad that was able to repurchase

Create Zalo customer/stakeholder's journey map

Teamwork: 10'

- Identify who is your target stakeholder?
- Create a stakeholder's journey map.
- Identify where the value breaks (stakeholder's Pain Point).

RMIT UNIVERSITY

Systematic Inventive Thinking

SIT Tools

RMIT UNIVERSITY

Ready for what's next

Brain games

Instructions will be given by lecturer.

RMIT UNIVERSITY

A hotel must have a reception desk.

A gym membership must be monthly.

A bank must have branches.

Jewelry must be sold as a finished product.

Samsung TV frame

football stadium

SIT Tools

Task Unification: What else can this do?

Subtraction: What can we remove?

Division: Which component can be reorganised?

Multiplication: What can we duplicate or vary?

Attribute Dependency: What can change based on context?

Applying the Creative Matrix
Pain point: *Waiting time at crowded outlets*

Tool	Idea Direction
Subtraction	Remove waiting step entirely
Task Unification	Staff handles ordering + service
Multiplication	Multiple ordering channels
Dependency	Dynamic ordering based on crowd/time

Generate Solutions

Use your **Customer Journey Map**

→

Select 2-3 **top value breaks**

↓

Apply the Creative Matrix

→

Generate **at least 05 ideas**

Creative Matrix

	Value break 1	Value break 2	Value break 3
Subtraction			
Task Unification			
Multiplication			
Dependency			

Value breaks are the Customer/Stakeholder's pain points (from SJM).

Validate your Ideas

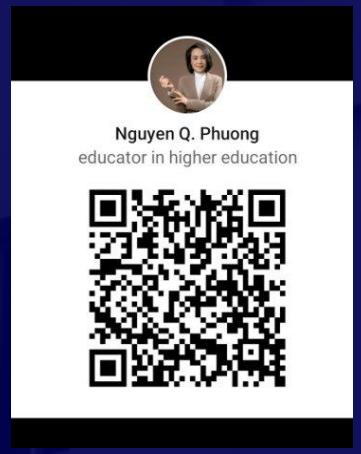

- **Teamwork: 10'**
- **Upload your team's Creative Matrix on Canvas.**

- Select your **top solution from the Creative Matrix.**
- Focus on:
  - One key customer/stakeholder
  - One key pain
  - One clear solution

RMIT UNIVERSITY

Thank you!
